

# Procedures

So far we have been typing commands one line at a time into the command center now we will look at typing commands into a procedure.

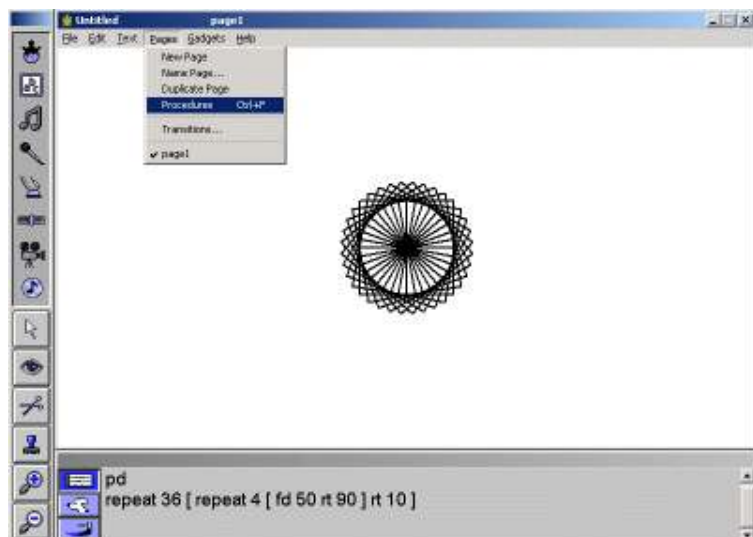

A procedure is a list of commands typed into the procedures page.

All procedures start with the word **to** and end with the word **end**.

Every procedure must have a unique name. eg **to circle**.

To switch to the procedures page select **Pages | Procedures** or use the keyboard shortcut **CTRL + F**

At first the procedures page will be blank
